

INDUSTRY  
MARKETPLACE

## The world's first autonomous and decentralized **INDUSTRY MARKETPLACE**

The Industry Marketplace provides a vendor- and industry-neutral platform to automate the trading of physical and digital goods / services. The Industry Marketplace **builds on specifications** developed by the Platform Industrie 4.0, Germany's central network for the advancement of digital transformation in manufacturing, **and augments them** with features such as distributed ledger technology, immutable audit logs and standardized, machine-readable contracts. An integrated decentralized identity system ensures the authenticity of all participants, and enables secure communication across the industry landscape.

The Industry Marketplace has been developed by world-leading academic and standardization bodies, enterprises and thought leaders, to allow a secure, autonomous and vendor-neutral integration for Industry 4.0.
